Community-based interventions for the use and conservation ... Scavenging chicken production in Africa is important for the livelihood of the poor. In most countries, these low inputs, low output systems employ local breeds making use of the feeding resources available in the household. However, their replacement with introduced exotic breeds with higher productivities represents a risk for their conservation.

Based initially on data from livestock, conservation biologists proposed the 50/500 rule of thumb for managing wild species : in the short term, the effective population size should not be less than 50 to avoid extinction risk due to genetic effects; in the long term, the effective population should not be less than 500. Surprisingly, such low effective population sizes in many cattle industrial breeds did not warn scientists in charge of the management of these breeds, maybe because a low ...

Conservation genetics of cattle, sheep, and goats ...

Despite growing interest in safeguarding biodiversity of livestock and poultry, genetic erosion continues The Scottish Highland Cattle is a hardy breed that thrives in harsh environments. It is frequently used for conservation grazing as it eats plants that many other cattle avoid.

Genetic Conservation Of Domestic Livestock [EBOOK]

Interest in genetic conservation and the survival of rare breeds has increased steadily in recent years. Following a successful conference held at Warwick, UK, in 1989 (published as Genetic Conservation of Domestic Livestock), a further conference was held in Budapest, Hungary in August 1991. This book presents selected edited papers from the Budapest conference, reporting new developments and initiatives in this expanding field of research.

DEFAULT SET: Genetic Conservation of Domestic Livestock ...

For conservation of livestock breeds and small populations in nature, we advocate that long-term genetic and phenotypic monitoring is needed, and based on such data management decisions are taken (Box 1). Current and past performance of a population may represent poor predictors of future performance due to factors such as genotype by environment interactions, inbreeding, genetic drift, changed breeding objectives, and environmental changes.

What can livestock breeders learn from conservation ...

India's effort in conservation and management of indigenous livestock and poultry genetic resources and creation of data base. Pp. 175-190 in Animal Genetic Resources: Strategies for Improved Use and Conservation, J. Hodges, ed. Rome, Italy: Food and Agriculture Organization of the United Na- tions.
