One molar is the molarity of a solution where one gram of solute dissolves in a litre of solution. Since in a solution, the solvent and solute blend to make a solution. Therefore, we take the total volume of the solution. Molarity Formula With Example

Molarity is used to express the concentration of a solution. Also known as molar concentration, molarity is the number of moles of solute (the material dissolved) per liter of solution. The units of molarity are moles per cubic decimeter, written mol dm⁻³ or simply M.

Molarity is a unit of concentration, measuring the number of moles of a solute per liter of solution. The strategy for solving molarity problems is fairly simple. This outlines a straightforward method to calculate the molarity of a solution. The key to calculating molarity is to remember the units of molarity (M): moles
