***Ambient intelligence (AmI) was established in the late 1990s as a recent paradigm for electronic environments for the timeframe of 2010–2020. AmI is essentially an elaboration of Mark Weiser's vision of ubiquitous computing. Weiser was aiming at a novel mobile computing infrastructure integrated into the networked environment of people. AmI is the idea of a technology that will become invisibly embedded in our natural surroundings, present whenever we need it, enabled by simple and effortless interaction, attuned to all our senses, adaptive to users, context-sensitive, and autonomous. AmI refers to smart electronic environments that are sensitive and responsive to***

*the presence of people. Since its adoption the vision has grown and fully developed, becoming quite influential in the development of novel ideas for information processing and new concepts for multi-disciplinary fields including electrical engineering, computer science, industrial design, user interfaces, and cognitive sciences. The AmI system provides a basis for new paradigms of technological innovation within a multi-dimensional society. The added value of the AmI vision is the fact that the large-scale integration of electronics into the environment allows the actors, i. e. , people and objects, to collaborate with their surroundings in a natural measure. This is directly related to the increasing societal demand for communication and the exchange of information. Many different companies can significantly contribute to the integrated goals and targets of the United Nations' sustainable development goals, such as poverty reduction by 2030. Poverty is not only about people living on less than \$1.25 per day, but more fundamentally, it is their lack of capabilities and access to participate in productive economic activities. If companies can contribute in order to provide access and the necessary skills, then individuals will have the capabilities to achieve their aspirations, including earning a higher income. Corporate Social Responsibility and Sustainable Development supports Sen's assertions that poverty can be alleviated if the capability of individuals is improved. Beyond that, this book shows that sustainable development goals can be achieved when the company's CSR programs and social capital development in improving people's capabilities are combined with necessary finance access and market access for the poor. The theoretical model developed from the journey of Astra International, one of the largest public-listed companies in Indonesia, is replicable for other companies aspiring to be sustainable in developing countries. The model shows a virtuous cycle between the corporate aim, CSR programs, social capital and corporate sustainability. This volume is of great value to academics, practitioners and policy makers interested in the themes of CSR, social capital and sustainable development of developing countries. It also appeals to professionals in industry associations, development agencies and international organizations, as well as NGOs that are concerned with the achievement of sustainable development goals by 2030.
