Quicklets: Your Reading Sidekick! ABOUT THE BOOK *Hot, Flat, and Crowded: Why We Need a Green Revolution and How it Can Renew America*, is the follow-up and companion piece to his 2005 bestseller *The World is Flat.: A Brief History of the Twenty-First Century*. In it he takes themes developed in *The World is Flat* the flattening of the world by means of the personal computer, internet, and the software that both share and applies it to the burgeoning Green movement. Published in 2008, it sharply critiques Americas stance on the environmental impact of its massive consumption of energy and how the world as a whole is following Americas wasteful lead. Friedman uses his experience and analytical eye as a foreign affairs columnist with *The New York Times* to further examine the political impact of the Wests love affair with Middle Eastern oil. He uses this analysis to draw correlations between oil markets and the democracy of oil-producing countries. He describes how a hotter, more crowded world with a more level playing field has combined to create a system where American-style appetites for energy continue to grow worldwide, threatening biodiversity and the development for new, cleaner energy technologies. MEET THE AUTHOR Lucretius Coleman is a writer, physicist, husband, father, and curmudgeon. He hopes to build the world's first practical quantum computer when not busy writing the next Great American Novels. He loves it when science, technology, and pop culture intersect to create the Eureka! moments that drive the world's greatness. When not making fun of his wife's affinity for trashy romance, Lucretius spends his time reading comic books and watching *The Real Housewives of Atlanta*. EXCERPT FROM THE BOOK Americas place in the worlds environmental landscape is one of leadership, but not in a good way. Were resource hogs and gas guzzlers, coal shovelers and oil junkies. While we remain firmly entrenched as the worlds economic, political, scientific, and engineering leader, Americas moral and ethical absence of a strong and coherent environmental policy threatens that dominance. Indeed, it threatens the globe. In a fluid world where innovation is at a shortage, America finds itself lacking. Americans talk about going Green but refuse to live it. In a world where 9/11 is only a memory away, and proud servicemen and women remain vigilant against the forces of terrorism and extremism, we continue to fund the enemy by sending dollars to the Middle East. In a world where growing populations strive to emulate the plush middle-class lifestyles Americans now take for granted, we continue to serve as a bad example in the areas of consumption and conservation. threshold of superpower status. Yet India is strikingly different from all other global colossi. While it is the world's most populous democracy and enjoys the benefits of its internationally competitive high-tech and software industries, India also contends with extremes of poverty, inequality, and political and religious violence. This accessible and vividly written book presents a new interpretation of India's history, focusing particular attention on the impact of British imperialism on Independent India. Maria Misra begins with the rebellion against the British in 1857 and tracks the country's advance to the present day. India's extremes persist, the author argues, because its politics rest upon a peculiar foundation in which traditional ideas of hierarchy, difference, and privilege coexist to a remarkable degree with modern notions of equality and democracy. The challenge of India's leaders today, as in the last sixty years, is to weave together the disparate threads of the nation's ancient culture, colonial legacy, and modern experience. Explores globalization, its opportunities for individual empowerment, its achievements at lifting millions out of poverty, and its drawbacks--environmental, social, and political. SERIES PREMIERE Ten minutes in the future, the world runs on an economy of job shares and apps, including Reapr: a crowdfunding platform to fund assassinations. Charlie Ellison leads a quiet, normal life until she's suddenly targeted by a million-dollar Reapr campaign. This "ambitious [and] delightful" (*The New York Times*) work of literary nonfiction interweaves the science and history of the powerful refrigerant (and dangerous greenhouse gas) Freon with a haunting meditation on how to live meaningfully and morally in a rapidly heating world. In *After Cooling*, Eric Dean Wilson braids together air-conditioning history, climate science, road trips, and philosophy to tell the story of the birth, life, and afterlife of Freon, the refrigerant that ripped a hole larger than the continental United States in the ozone layer. As he traces the refrigerant's life span from its invention in the 1920s—when it was hailed as a miracle of scientific progress—to efforts in the 1980s to ban the chemical (and the resulting political backlash), Wilson finds himself on a journey through the American heartland, trailing a man who buys up old tanks of Freon stockpiled in attics and basements to destroy what remains of the chemical before it can do further harm. Wilson is at heart an essayist, looking far and wide to tease out what particular forces in American culture—in capitalism, in systemic racism, in our values—combined to lead us into the Freon crisis and then out. "Meticulously researched and engagingly written" (*Amitav Ghosh*), this "knockout debut" (*New York Journal of Books*) offers a rare glimpse of environmental hope, suggesting that maybe the vast and terrifying problem of global warming is not beyond our grasp to face. This book analyses sociological discussions on crowds and masses since the late nineteenth century, covering France, Germany and the USA. A *New York Times* Book Review Notable Book of the Year A *Washington Post* Best Book of the Year A *Businessweek* Best Business Book of the Year A *Chicago Tribune* Best Book of the Year In this brilliant, essential book, Pulitzer Prize-winning author Thomas L. Friedman speaks to America's urgent need for national renewal and explains how a green revolution can bring about both a sustainable environment and a sustainable America. Friedman explains how global warming, rapidly growing populations, and the expansion of the world's middle class through globalization have produced a dangerously unstable planet—one that is "hot, flat, and crowded." In this Release 2.0 edition, he also shows how the very habits that led us to ravage the natural world led to the meltdown of the financial markets and the Great Recession. The challenge of a sustainable way of life presents the United States with an opportunity not only to rebuild its economy, but to lead the world in radically innovating toward cleaner energy. And it could inspire Americans to something we haven't seen in a long time--nation-building in America--by summoning the intelligence, creativity, and concern for the common good that are our greatest national resources. *Hot, Flat, and Crowded* is classic Thomas L. Friedman: fearless, incisive, forward-looking, and rich in surprising common sense about the challenge--and the promise--of the future. David Kessler, one of the most renowned experts on death and grief, takes on three uniquely shared experiences that challenge our ability to explain and fully understand the mystery of our final days. The first is "visions." As the dying lose sight of this world, some people appear to be looking into the world to come. The second shared experience is getting ready for a "trip." These trips may seem to us to be all about leaving, but for the dying, they may be about arriving. Finally, the third phenomenon is "crowded rooms." The dying often talk about seeing a room full of people, as

they constantly repeat the word crowded. In truth, we never die alone. Just as loving hands greeted us when we were born, so will loving arms embrace us when we die. In the tapestry of life and death, we may begin to see connections to the past that we missed in life. While death may look like a loss to the living, the last hours of a dying person may be filled not with emptiness, but rather with fullness. In this fascinating book, David brings us stunning stories from the bedsides of the dying that will educate, enlighten, and comfort us all. Written for all readers, this expert analysis details the basics of space technology, diplomacy, commerce, exploration, and military applications from the mid-twentieth century to today. Space has become increasingly crowded since the end of the Cold War, and this book pays particular attention to the politics and economics of space and recent debates over national security, focusing on the competing themes of international competition and cooperation and the effort to avoid dangerous conflicts. Unfortunately, the growth of human space activity and challenges to existing international tools of management, such as rules, laws, and treaties, have increased the likelihood of conflict over a diminishing pool of space resources close to Earth. Drawing on more than twenty years of experience in international space debates and policy, James Clay Moltz points to the logic of cooperation and collaboration among the expanding number of space actors, considering their shared challenges regarding space traffic, orbital debris, radio-spectrum crowding, space situational awareness, and space weaponization. He concludes with policy recommendations for improving international space relations, focusing on enhanced communication, data sharing, and operational cooperation. This book focuses on two critical global issues—rapid population growth and a human-induced climate change. John Firor and Judith Jacobsen summarize the current status of these two issues, show how they are related to one another, and prescribe steps that governments, economies, societies, and individuals can adopt to stabilize both population and climate. Firor and Jacobsen argue that two revolutions are necessary to achieve a stable population and freedom from human-induced climate change: a social revolution that improves equity, particularly the status of women, and a technical revolution that yields vastly greater efficiency in energy and materials use than we have today. They offer a vision that incorporates these changes, and they urge professionals and activists to work to achieve them, even in the face of great odds.

Fired and ditched by Charlie, Vita sets off in hot pursuit of her former client and some answers. But Charlie's not alone. She's hired a brand new bodyguard, Circe, unaware she's a killer who has been stalking Charlie since her crowdfunded assassination campaign began. As this catastrophic throuple cat-and-mouses its way across America, feelings and knives and secrets will come out, including who started Charlie's Reapr campaign and why everyone wants her dead. All leading to a bloody showdown with the shadowy group responsible for turning Charlie's murder into a viral sensation. The final arc of the GLAAD-nominated and two-time Eisner Award-nominated series by writer CHRISTOPHER SEBELA (SHANGHAI RED, HIGH CRIMES), artists RO STEIN & TED BRANDT (DC Pride, Captain Marvel), TRIONA FARRELL (Runaways, Mech Cadet Yu), and CARDINAL RAE (BINGO LOVE, ROSE). The capacity to be alone, properly alone, is one of life's subtlest skills. Real solitude is a powerful resource we can call upon--a crucial ingredient for a rich interior life. It inspires reflection, allows creativity to flourish, and improves our relationships with ourselves and, unexpectedly, with others. Idle hands can, in fact, produce the extraordinary. In living bigger and faster, we have forgotten the joys of silence, and undervalued how profoundly it can revolutionize our lives. From a Nobel Prize-winning pioneer in environmental economics, an innovative account of how and why "green thinking" could cure many of the world's most serious problems—from global warming to pandemics Solving the world's biggest problems—from climate catastrophe and pandemics to wildfires and corporate malfeasance—requires, more than anything else, coming up with new ways to manage the powerful interactions that surround us. For carbon emissions and other environmental damage, this means ensuring that those responsible pay their full costs rather than continuing to pass them along to others, including future generations. In *The Spirit of Green*, Nobel Prize-winning economist William Nordhaus describes a new way of green thinking that would help us overcome our biggest challenges without sacrificing economic prosperity, in large part by accounting for the spillover costs of economic collisions. In a discussion that ranges from the history of the environmental movement to the Green New Deal, Nordhaus explains how the spirit of green thinking provides a compelling and hopeful new perspective on modern life. At the heart of green thinking is a recognition that the globalized world is shaped not by isolated individuals but rather by innumerable interactions inside and outside the economy. He shows how rethinking economic efficiency, sustainability, politics, profits, taxes, individual ethics, corporate social responsibility, finance, and more would improve the effectiveness and equity of our society. And he offers specific solutions—on how to price carbon, how to pursue low-carbon technologies, how to design an efficient tax system, and how to foster international cooperation through climate clubs. The result is a groundbreaking new vision of how we can have our environment and our economy too. Examines America's loss of focus and national purpose since 9/11, and the global environmental crisis, and shows how the solutions to these two problems are linked. Thomas L. Friedman S No. 1 Bestseller *The World Is Flat Has Helped Millions Of Readers To See Globalization In A New Way. Argument Speaks To All Who Are Concerned About The State Of The World In The Global Future. Friedman Proposes That An Ambitious National Strategy Which He Calls Geo-Greenism Is Not Only What We Need To Save The Planet From Overheating; It Is What We Need To Make Us All Healthier, Richer, More Innovative, More Productive, And More Secure. As In The World Is Flat, He Explains A New Era The Energy-Climate Era Through An Illuminating Account Of Recent Events. He Sets Out The Clean-Technology Breakthroughs The World Will Need; He Shows That The Et (Energy Technology) Revolution Will Be Both Transformative And Disruptive; And He Explains Why America Must Lead This Revolution With The First Green President And A Green New Deal, Spurred By The Greenest Generation. The dramatic story of the most famous regiment in American history: the Rough Riders, a motley group of soldiers led by Theodore Roosevelt, whose daring exploits marked the beginning of American imperialism in the 20th century. When America declared war on Spain in 1898, the US Army had just 26,000 men, spread around the country—hardly an army at all. In desperation, the Rough Riders were born. A unique group of volunteers, ranging from Ivy League athletes to Arizona cowboys and led by Theodore Roosevelt, they helped secure victory in Cuba in a series of gripping, bloody fights across the island. Roosevelt called their charge in the Battle of San Juan Hill his “crowded hour”—a turning point in his life, one that led directly to the White House. “The instant I received the order,” wrote Roosevelt, “I sprang on my horse and then my ‘crowded hour’ began.” As *The Crowded Hour* reveals, it was a turning point for America as well, uniting the country and ushering in a new era of global power. Both a portrait of these men, few of whom were traditional soldiers, and of the Spanish-American War itself, *The Crowded Hour* dives deep into the daily lives and struggles of Roosevelt and his regiment. Using diaries, letters, and memoirs, Risen illuminates a disproportionately influential moment in American history: a war of only six months’ time that dramatically altered the United States’ standing in the world. In this brilliant, enlightening narrative, the Rough Riders—and a country on the brink of a new global dominance—are brought fully and gloriously to life. The must-read summary of Thomas Friedman's book: "Hot, Flat and Crowded: Why We Need a Green Revolution – and How It Can Renew America". This complete summary of the ideas from Thomas Friedman's book "Hot, Flat and Crowded" shows that we are at a nexus of global warming (hot), globalisation, which means an affluent middle class wants to enjoy success, even at environmental expense (flat) and population growth (crowded). Green solutions are the only way all three of these issues can be resolved satisfactorily. It's also a huge commercial opportunity: the replacement of fossil fuels is a golden business opportunity. Friedman believes we need to declare a “code green” to stimulate industry, education and science in pursuit of environmental goals. In short, as Friedman says, “this is not about the whales anymore. It's about us.” This summary explains how we got the current situation, and the most effective ways we need to move forward. Environmental awareness needs to be a society norm; there needs to be incentives for individuals to build their own mini-arcs, rather than rely on federal measures. It also shows that not taking opportunities now will prove to be both environmentally and economically disastrous: the nation that embraces green technology innovation will be the world superpower for generations to come. Added-value of this summary: • Save time • Understand the key concepts • Increase your business knowledge To learn more, read "Hot, Flat and Crowded" and understand how we got to the current situation. A more powerful innovation, which seeks to discover not how things work but why we need things. The standard text on innovation advises would-be innovators to conduct creative brainstorming sessions and seek input from outsiders—users or communities. This kind of innovating can be effective at improving products but not at capturing bigger opportunities in the marketplace. In this book Roberto Verganti offers a new approach—one that does not set out to solve existing problems but to find breakthrough meaningful experiences. There is no brainstorming—which produces too many ideas, unfiltered—but a vision, subject to criticism. It does not come from outsiders but from one person's unique interpretation. The alternate path to innovation mapped by Verganti aims to discover not how things work but why we need things. It gives customers something more meaningful—something they can love. Verganti describes the work of companies, including Nest Labs, Apple, Yankee Candle, and Philips Healthcare, that have created successful businesses by doing just this. Nest Labs, for example, didn't create a more advanced programmable thermostat, because people don't love to program their home appliances. Nest's thermostat learns the habits of the household and bases its temperature settings accordingly. Verganti discusses principles and practices, methods and implementation. The process begins with a vision and proceeds through developmental criticism, first from a sparring partner and then from a circle of radical thinkers, then from external experts and interpreters, and only then from users. Innovation driven by meaning is the way to create value in our current world, where ideas are abundant but novel visions are rare. If something is meaningful for both the people who create it and the people who consume it, business value follows. This book makes recommendations for meeting four major challenges currently facing the United States, including globalization, the information technology revolution, chronic deficits, and unbalanced energy consumption. America has a huge problem. It faces four major challenges, on which its future depends, and it is

failing to meet them. In this book the authors analyze those challenges, globalization, the revolution in information technology, the nation's chronic deficits, and its pattern of energy consumption, and spell out what needs to be done now to rediscover America's power and prowess. They explain how the end of the cold war blinded the nation to the need to address these issues seriously. They show how America's history, when properly understood, provides the key to coping successfully and explain how the paralysis of the U.S. political system and the erosion of key American values have made it impossible to carry out the policies the country needs. This work is both a searching exploration of the American condition today and a rousing manifesto for American renewal.

An engineer is caught in a lethal trap after he follows a beautiful woman home in this thriller from the New York Times–bestselling author of *The Midnight Bell*. Matthew Brady was just out for a good time. After a long dry spell working in the deserts of Kuwait, the young engineer was ready to let loose in merry old London. So when a beautiful young woman drifts out of the fog and asks him to accompany her to her apartment, it seems like a dream come true for the happily muddled American. His drunken dream soon becomes a waking nightmare when he comes to with the mysterious woman dead on the floor, the police ready to pin a murder on him, and absolutely no memory of what happened. Running for his life, Brady knows his only chance for freedom is to clear his name. But to do so he will have to descend into the twisted London underworld, where money isn't the only currency, death is a final payment, and the man behind the set-up is waiting with a bullet just for him. From the international bestselling author of *The Eagle Has Landed* and the Sean Dillon series, this twisting mystery will keep you racing to the last page.

In this book, Ralph Peterson helps teachers see what it is they do when they bring students together to make a community. In this book, we have hand-picked the most sophisticated, unanticipated, absorbing (if not at times crackpot!), original and musing book reviews of "Hot, Flat, and Crowded: Why We Need a Green Revolution--and How It Can Renew America." Don't say we didn't warn you: these reviews are known to shock with their unconventionality or intimacy. Some may be startled by their biting sincerity; others may be spellbound by their unbridled flights of fantasy. Don't buy this book if: 1. You don't have nerves of steel. 2. You expect to get pregnant in the next five minutes. 3. You've heard it all.

IBPA Benjamin Franklin Award GOLD Winner in Humor *Crowded in the Middle of Nowhere: Tales of Humor and Healing from Rural America* is a collection of humorous and poignant stories from a veterinarian in a small, dusty farming and ranching community in rural West Texas. Dr. Brock gives you an intimate look into his small-town and big-hearted perspective on life, animals, and their owners. His unique perspective and tales of doctoring beloved pets, cantankerous livestock, and occasionally their owners will make you smile, laugh, cry, and evoke every other emotion under the sun.

"Tom King's debut novel opens in an imaginative world of comic book superheroes struggling to take on normal lives after sacrificing their powers to save the world"-- Why do we often long for solitude but dread loneliness? What happens when the walls we build around ourselves are suddenly removed—or made impenetrable? If privacy is something we can count as a basic right, why are our laws, technology, and lifestyles increasingly chipping it away? These are some of the themes that Sue Halpern eloquently explores in these profoundly original essays. In pursuit of the riddle of solitude, Halpern talks to Trappist monks and secular hermits, corresponds with a prisoner in solitary confinement, and visits an AIDS hospice and a shelter for the homeless places where privacy is the first—and perhaps the most essential—thing to go. This is a book that lends weight to the ideas that have become dangerously abstract in a society of data bases and car faxes, a guide not only of the routes to solitude but to the selves we discover only when we arrive there.

Assessment of the environmental degradation, rapid population growth, and extreme poverty that threaten global peace and prosperity, with practical solutions based on a new economic paradigm for our crowded planet. This revised edition of the number-one bestseller and winner of the 1989 National Book Award includes the Pulitzer Prize-winning author's new, updated epilogue. One of the most thought-provoking books ever written about the Middle East, *From Beirut to Jerusalem* remains vital to our understanding of this complex and volatile region of the world. Three-time Pulitzer Prize winner Thomas L. Friedman drew upon his ten years of experience reporting from Lebanon and Israel to write this now-classic work of journalism. In a new afterword, he updates his journey with a fresh discussion of the Arab Awakenings and how they are transforming the area, and a new look at relations between Israelis and Palestinians, and Israelis and Israelis. Rich with anecdote, history, analysis, and autobiography, *From Beirut to Jerusalem* will continue to shape how we see the Middle East for many years to come. "If you're only going to read one book on the Middle East, this is it."--Seymour M. Hersh

From the Pulitzer Prize–winning New York Times columnist and bestselling author of *From Beirut to Jerusalem* and *The Lexus and the Olive Tree* comes this smart, penetrating, brilliantly informed book that is indispensable for understanding today's radically new world and America's complex place in it. Thomas L. Friedman received his third Pulitzer Prize in 2002 "for his clarity of vision, based on extensive reporting, in commenting on the worldwide impact of the terrorist threat." In *Longitudes and Attitudes* he gives us all of the columns he has published about the most momentous news story of our time, as well as a diary of his private experiences and reflections during his post–September 11 travels. Updated for this new paperback edition, with over two years' worth of Friedman's columns and an expanded version of his diary, *Longitudes and Attitudes* is a broadly influential work from our

most trusted observer of the international scene. In this fascinating book, New Yorker business columnist James Surowiecki explores a deceptively simple idea: Large groups of people are smarter than an elite few, no matter how brilliant—better at solving problems, fostering innovation, coming to wise decisions, even predicting the future. With boundless erudition and in delightfully clear prose, Surowiecki ranges across fields as diverse as popular culture, psychology, ant biology, behavioral economics, artificial intelligence, military history, and politics to show how this simple idea offers important lessons for how we live our lives, select our leaders, run our companies, and think about our world. A farmer's simple drive to the country fair turns into a chaotic journey as more and more of his animals want to climb aboard. The obliging farmer lets each group of animals join him -- first a single chicken, followed by two sheep, three pigs and four cows -- until his little truck gets stuck at the bottom of a steep hill. Luckily his passengers are as helpful as he is and everyone gets out to push. The trip ends happily with a spectacular crash into the pie contest tent where everyone eats their fill. Children love to chant the catchy patterned rhymes ("Farmer, farmer, Going to the fair. Chicken wants a ride. There's room to spare.") and return to the book again and again. John Bianchi's wonky cartoon illustrations keep interest high and provide lots of laughs while effectively developing the theme of sharing. In this fascinating look at the race to secure the global food supply, environmental journalist and professor Amanda Little tells the defining story of the sustainable food revolution as she weaves together stories from the world's most creative and controversial innovators on the front lines of food science, agriculture, and climate change. Climate models show that global crop production will decline every decade for the rest of this century due to drought, heat, and flooding. Water supplies are in jeopardy. Meanwhile, the world's population is expected to grow another 30 percent by midcentury. So how, really, will we feed nine billion people sustainably in the coming decades? Amanda Little, a professor at Vanderbilt University and an award-winning journalist, spent three years traveling through a dozen countries and as many U.S. states in search of answers to this question. Her journey took her from an apple orchard in Wisconsin to a remote control organic farm in Shanghai, from Norwegian fish farms to famine-stricken regions of Ethiopia. The raise to reinvent the global food system is on, and the challenge is twofold: We must solve the existing problems of industrial agriculture while also preparing for the pressures ahead. Through her interviews and adventures with farmers, scientists, activists, and engineers, Little tells the fascinating story of human innovation and explores new and old approaches to food production while charting the growth of a movement that could redefine sustainable food on a grand scale. She meets small permaculture farmers and "Big Food" executives, botanists studying ancient superfoods and Kenyan farmers growing the country's first GMO corn. She travels to places that might seem irrelevant to the future of food yet surprisingly play a critical role--a California sewage plant, a U.S. Army research lab, even the inside of a monsoon cloud above Mumbai. Little asks tough questions: Can GMOs actually be good for the environment--and for us? Are we facing the end of animal meat? What will it take to eliminate harmful chemicals from farming? How can a clean, climate-resilient food supply become accessible to all? Throughout her journey, Little finds and shares a deeper understanding of the threats of climate change and encounters a sense of awe and optimism about the lessons of our past and the scope of human ingenuity. An analysis of globalisation as an international system that today directly or indirectly influences the politics, environment, geopolitics and economics of virtually every country in the world. In Lucknow, the capital of India's most populous state, the stigmas and colonial legacies surrounding sexual propriety and population growth affect how Muslim women, often in poverty, cope with infertility. In Infertility in a Crowded Country, Holly Donahue Singh draws on interviews, observation, and autoethnographic perspectives in local communities and Lucknow's infertility clinics to examine access to technology and treatments and to explore how pop culture shapes the reproductive paths of women and their supporters through clinical spaces, health camps, religious sites, and adoption agencies. Donahue Singh finds that women are willing to transgress social and religious boundaries to seek healing. By focusing on interpersonal connections, Infertility in a Crowded Country provides a fascinating starting point for discussions of family, kinship, and gender; the global politics of reproduction and reproductive technologies; and ideologies and social practices around creating families.
