Hot Metal Mar 30 2023 Jim Taylor is an old school motorcycle rider and mechanic, an opportunist and adventurer: 'Hot Metal' is a helter-skelter ride of self-discovery, energised by the author's unquenchable passion for a life on the hard road. From bike club culture and camaraderie in the towns and villages of Britain to conflict and upheaval in a forgotten Asian war; the motorcycles are the driving force of this remarkably frank and hugely entertaining story. Prepare to be moved - in more ways than you ever thought possible - by this gripping and fascinating new book by the author of 'Wheels of Steel'.

Japan's Motorcycle Wars Jul 30 2020 For decades the crown jewels of Japan's postwar manufacturing industry, motorcycles remain one of Japan's top exports. Japan's Motorcycle Wars assesses the historical development and societal impact of the motorcycle industry, from the influence of motor sports on vehicle sales in the early 1900s to the postwar developments that led to the massive wave of motorization sweeping the Asia-Pacific region today. Jeffrey Alexander brings a wealth of information to light, providing English translations of transcripts, industry publications, and company histories that have until now been available only in Japanese. By exploring the industry as a whole, he reveals that Japan's motorcycle industry was characterized not by communitarian success but by misplaced loyalties, technical disasters, and brutal competition.

Automotive Fuels Reference Book Apr 06 2021 The first two editions of this title, published by SAE International in 1990 and 1995, have been best-selling definitive references for those needing technical information about automotive fuels. This long-awaited new edition has been thoroughly revised and updated, yet retains the original fundamental fuels information that readers find so useful. This book is written for those with an interest in or a need to understand automotive fuels. Because automotive fuels can no longer be developed in isolation from the engines that will convert the fuel into the power necessary to drive our automobiles, knowledge of automotive fuels will also be essential to those working with automotive engines. Small quantities of fuel additives increasingly play an important role in bridging the gap that often exists between fuel that can easily be produced and fuel that is needed by the ever-more sophisticated automotive engine. This book pulls together in a single, extensively referenced volume, the three different but related topics of automotive fuels, fuel additives, and engines, and shows how all three areas work together. It includes a brief history of automotive fuels development, followed by chapters on automotive fuels manufacture from crude oil and other fossil sources. One chapter is dedicated to the manufacture of automotive fuels and fuel blending components from renewable sources. The safe handling, transport, and storage of fuels, from all sources, are covered. New combustion systems to achieve reduced emissions and increased efficiency are discussed, and the way in which the fuels' physical and chemical characteristics affect these combustion processes and the emissions produced are included. There is also discussion on engine fuel system development and how these different systems affect the corresponding fuel requirements. Because the book is for a global market, fuel system technologies that only exist in the legacy fleet in some markets are included. The way in which fuel requirements are developed and specified is discussed. This covers test methods from simple laboratory bench tests, through engine testing, and long-term test procedures.

Trap Lines North Jun 08 2021 Winter was near, and with Big Lindsay laid up, it looked as if the Vanderbecks were in for a hard time. Winter way up north in the Thunder Bay District of Ontario is a serious matter. It is long and bitter and there is much work to be done that requires experience and woods wisdom and courage. This winter it was up to eighteen-year-old Jim Vanderbeck and his younger brother Lindsay to take their father's place on the trap-lines. Upon their efforts, pitted against real dangers and hardships, depended the annual catch of fur and the income of the family. Jim felt the responsibility but he also felt the adventure of being all on his own. Trap-Lines North is the story of that winter. So realistically does Stephen Meader retell it that the reader is virtually taken into the woods with Jim in the fall. He tramps from line camp to line camp, followed by the staunch old sled dogs, Bruno and Pat. He sleeps in rough pole lean-tos, eats moose meat, catches fish through the ice, and from time to time feels a chill along his spine when he comes upon the tracks of the lone gray killer---the biggest wolf in Canada. Jim Vanderbeck is a real person.

In sparkling images, see 1907's Silent Gray Fellow, with its bicycle-like frame; move on to the post-war Hydra Glide, aimed at a totally new market; the Dyna Glide, born in 1947 and existing in all its shiny glory till 1996; the Evo Sportster, offered in two engine sizes; and right up to today's sleek, fast cycles. There are also brochure covers, countless close-ups of smaller details, and a wealth of other fascinating facts.

The Harley-Davidson Story Mar 18 2022 The Harley-Davidson Story: Tales from the Archives is a fascinating, visually driven overview of the motor company's rich story, created in cooperation with the Harley-Davidson Museum. The story of Harley-Davidson is a classic American tale of spirit, invention, and the right idea at the right time. From its beginning in a small Milwaukee shed in 1903, William Harley and his cousins, the Davidson brothers, set in motion what would eventually become the world's most iconic motorcycle company. While other motorcycle companies rose and fell through the teens and 1920s, Harley went from strength to strength, whether introducing its first V-twin motor or dominating race tracks across America. The Milwaukee Miracle even prospered during WWII, building war bikes for the armed forces. By the 1950s, they'd buried their last American-built competitor, Indian, and gained a hold over the US market that they maintain to this day. A remarkable story deserves a remarkable space to recount it. Such is the Harley-Davidson Museum in Milwaukee, which opened in 2009. Harley-Davidson partnered with Motorbooks to create this book relaying Harley-Davidson's story, as told through the museum's displays and archive assets.

The Chemistry of Hydrocarbon Fuels Nov 13 2021 The Chemistry of Hydrocarbon Fuels is concerned with the chemical aspects of hydrofuels such as coal, petroleum, and natural gas. Topics covered include diagenesis and catagenesis, processing of natural gas and petroleum fractions, coal combustion, and chemicals that can be obtained from fuels. This book is comprised of 14 chapters and begins with a comprehensive treatment of the formation of fuels from accumulated organic matter, along with the organic geochemistry of coal, oil, and gas. The following chapters focus on the composition of hydrocarbon fuels and some of their important physical properties. Production and use of synthesis gas, alternate fuels from coal, and oxygenated fuels are considered. The remaining chapters deal with some of the chemistry of separation, refining, and use of hydrocarbon fuels. This monograph is written primarily for practicing scientists and engineers, fuel scientists, petroleum chemists, and those who are new to the field of fuel science and seek an introduction to fuel chemistry.

Steve's life was incredible, funny and ultimately tragic.

Project BioShield Aug 30 2020 The anthrax attacks in September and October 2001 highlighted the need to develop medical countermeasures. The Project BioShield Act of 2004 authorized the Department of Health and Human Services (HHS) to procure countermeasures for a Strategic National Stockpile. However, in December 2006, HHS terminated the contract for a recombinant protective antigen (rPA) anthrax vaccine because VaxGen failed to meet a critical contractual milestone. Also, supplies of the licensed BioThrax anthrax vaccine already in the stockpile will start expiring in 2008. GAO was asked to identify (1) factors contributing to the failure of the rPA vaccine contract and (2) issues associated with using the BioThrax in the stockpile. GAO interviewed agency and industry officials, reviewed documents, and consulted with biodefense experts.
