Persons in Context Aug 30 2020 Social changes, including women's entry into the labour force and higher rates of divorce and remarriage, dramatically altered family life and raised complex questions about how individuals develop in the ever changing contexts of family, community and society. The goal of this 1989 volume is to enhance our understanding of human development in an evolving social context.

Featuring contributions by eminent scholars in developmental, clinical and personality psychology, behavioural genetics and sociology, Persons in Context: Developmental Processes presents advances in theory and research on two central topics: how environments influence individuals in the course of development and how individuals select and shape the very environments that influence their development. The volume assembles a theoretically convergent body of research on how individuals and environments are linked in the course of development, including studies of genetics - environment relations, social interns, social interchanges in family systems, and linkages between the family and other major settings, such as peer groups, communities, and the larger social structure.

Mental Health, Intellectual and Developmental Disabilities and the Ageing Process Feb 02 2021 This book brings together findings from research and clinical practice, with comprehensive coverage of the important aspects of mental health in ageing persons with intellectual and developmental disabilities. It is crucial for professionals involved in the care of persons with all intellectual and developmental disabilities to have a broad understanding of the essential range of

issues, and therefore this book provides a truly multi-disciplinary perspective, complete with many figures and illustrations to underline the key points. Undoubtedly, research and clinical practice are much more advanced in the general ageing population than in persons with intellectual and developmental disabilities, and so professionals and academics must be made fully aware of commonalities and idiosyncrasies of older people with intellectual and developmental disabilities. This book presents the ongoing developments concerning mental health and aging, which will become relevant to the intellectually disabled population. Through experience, this book also acknowledges that the impact on the persons themselves and on their carers always needs to be taken into account, with treatment programs established with a multi-faceted team approach in mind. Avoiding the jargon of many titles in this area while maintaining the hands-on approach of clinical practice, this book meshes the practical and scientific worlds, with all chapters written by leading experts in the field. Beyond the US, the IASSIDD support expands the book message worldwide.

Neurological, Psychiatric, and Developmental Disorders Mar 30 2023 Brain disordersâ€"neurological, psychiatric, and developmentalâ€"now affect at least 250 million people in the developing world, and this number is expected to rise as life expectancy increases. Yet public and private health systems in developing countries have paid relatively little attention to brain disorders. The negative attitudes, prejudice, and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on

families, communities, and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression, and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.

New Directions in the Treatment of Aggressive Behavior for Persons with Mental and Developmental Disabilities Oct 01 2020 New Directions in the Treatment of Aggressive Behavior in Persons with Mental and Developmental Disabilities was written because of the paucity of practical, evidence-based and person-centered information regarding the treatment and management of aggressive behavior exhibited by persons with these disabilities. This book will acquaint readers about the: *scope of aggression among the mentally and developmentally disabled persons *basic principles for designing and validating novel treatments for aggressive behavior *comprehensive functional assessment of aggression that permits individualized design of treatment interventions with a high likelihood of success in reducing or eliminating aggression toward others or self. *positive behavior supports for a wide range of developmentally disabled persons, including those with traumatic brain injuries *currently validated, evidence-based medications for the control of aggression and how to use medications so they are monitored for effectiveness *cognitive-behavior therapy

for aggression among the mentally ill *national and international dissemination and adoption of the treatment techniques described in this book The major reason for writing this book was to bring these new directions in the effective treatment of aggressive behavior into the mainstream of services for persons with mental and developmental disabilities. The Editors engaged in enormous efforts of dissemination -- far beyond publications and presentations to professional colleagues at conferences, conventions and institutes. Our extensive dissemination efforts - where they given workshops and training institutes - have taken place in China, Japan, India, Turkey, Israel, Algeria, Spain, France, Italy, Bulgaria, Poland, Czech Republic and Slovakia, Austria, Germany, Sweden, Norway, Denmark, U.K., Ireland, Australia, New Zealand and South Africa. For example, our colleagues in China recently informed us that over 50,000 Chinese persons with schizophrenia have participated in our published modules for training social and independent living skills. Our previous books have been translated in numerous languages, and at last count are in active use in 23 countries. Their goal in writing this book was to encourage various service agencies, treatment facilities and clinical teams to use positive techniques in managing aggressive behavior and teach appropriate communication and self-management skills.

Mental Disorders and Disabilities Among Low-Income Children May 20 2022 Children living in poverty are more likely to have mental health problems, and their conditions are more likely to be severe. Of the approximately 1.3 million children who were recipients of Supplemental Security Income (SSI) disability benefits in 2013, about 50% were disabled primarily due to a mental disorder. An increase in the number of children who are recipients of SSI benefits due to mental disorders has been observed through several decades of the program beginning in 1985 and continuing through 2010. Nevertheless, less than 1% of children in the United States are recipients of SSI disability benefits for a mental disorder. At the request of the Social Security Administration, Mental Disorders and Disability Among Low-Income Children compares national trends in the number of children with mental disorders with the trends in the number of children receiving benefits from the SSI program, and describes the possible factors that may contribute to any differences between the two groups. This report provides an overview of the current status of the diagnosis and treatment of mental disorders, and the levels of impairment in the U.S. population under age 18. The report focuses on 6 mental disorders, chosen due to their prevalence and the severity of disability attributed to those disorders within the SSI disability program: attention-deficit/hyperactivity disorder, oppositional defiant disorder/conduct disorder, autism spectrum disorder,

intellectual disability, learning disabilities, and mood disorders. While this report is not a comprehensive discussion of these disorders, Mental Disorders and Disability Among Low-Income Children provides the best currently available information regarding demographics, diagnosis, treatment, and expectations for the disorder time course - both the natural course and under treatment.

Changes in family roles and routines can cause stress for parents, siblings, and extended family alike as they confront multiple issues, including behavioural problems and frequent healthcare needs. Despite such challenges, many families derive a sense of meaning from facing their difficulties in a positive way. This book surveys the most recent empirical research on families of children with disabilities and provides guidelines and strategies for the developmental and family psychologists who support these clients. The book follows a developmental progression, first examining the immediate effects that a child's disability can have on his or her family and looking at the changes that occur as the child grows and faces new challenges. In doing so, the author examines studies employing a variety of methodologies, including quantitative research, meta-analyses, and qualitative methods such as narrative analysis. The book also describes cognitive behavioural interventions and programs that train parents to more effectively manage child behavioural problems and thereby improve family well-being.

Perspectives on Poverty and Governmental Dependence Likelihood Regarding People with Developmental Disabilities

when They Transition Into Adulthood May 08 2021

Transitioning from high school to adulthood is a momentous phase for students with developmental disabilities. However, when students with developmental disabilities exit secondary education, they face a high probability of being dependent on government support to live. This study delved into the roles families, social agencies, and secondary education systems play in formulating individuals with disabilities' points of view regarding their capabilities to live independently without having to rely on governmental supports. The key research question explored the following: How do individuals with developmental disabilities, at two vital phases in their lives, internalize perceived explicit and ambiguous messages that secondary education institutions, their own families, and social service agencies send regarding their abilities to live independently above the poverty level? Four participants with developmental disabilities were qualitatively interviewed for this study. With the absence of a school personnel member who did not contribute to the study, one school personnel member, family member, and social service agency worker associated with each participant were interviewed as well. The themes derived from the data were: a) the construction of disability: reproducing or resisting societal descriptions of disability, b) overall resistant messages (or perceived messages) experienced by participants from schools regarding one's disabilities and how families and social service agencies supported those messages, c) reproductive and resistant messages (or perceived messages) experienced by participants from schools regarding one's disabilities and how families and social service agencies supported or did not those messages, and d) overall reproductive messages (or perceived messages) experienced by participants from

schools regarding one's disabilities and how families and social service agencies supported or did not support those messages. These themes demonstrated how a combination of reproduction, agency, construction of disability, and resistance shape the participants' economic and governmental dependency statuses. One implication of this research is the positive influence it will possibly have on the practices of families, social service agencies, and secondary education systems regarding how they shape the beliefs of individuals with disabilities about self-reliance. Another implication of this research is its impact on future investigations on similar topics.
